

Subject: ELINDER 'Decommissioning Summer School': an opportunity for undergraduate students on 8-12 July 2019 in Ispra, Italy

Dear colleagues,

The European Commission Joint Research Centre (JRC) in Ispra, Italy, is hosting a 5-day training on nuclear decommissioning and waste management on 8-12 July 2019. The course also includes visits of the nuclear installations in Ispra and practical illustrative case studies.

This 'Decommissioning Summer School' is part of the [ELINDER](#) training programme and is open to undergraduate students who have not yet a professional activity and are willing to enrich their curriculum during their holiday's time.

We would be grateful if you could support the initiative and address this [invitation](#) to universities and professionals in the field of engineering, science and technology including environmental science, sustainability, chemistry, biology, geology, ... so that the concerned students can apply.

The participation is free of charge for accepted students. The JRC supports the courses and accommodation. Travel costs may be subject to partial reimbursement.

Interested students should express their interest and complete the application form available [here](#) (also attached) and send it together with their student card to [Ms Daniela Santopolo](#) (JRC).

The course is limited to 40 participants and the deadline to apply is end of April 2019.

Further information on ELINDER is available on the [dedicated page](#) of the JRC website.

I thank you for your support and cooperation for the success of this initiative aimed at students.

Kind regards,

Sophie Beernaerts
