Nosilec predmeta / Lecturer:

Jeziki / Languages:	Predavanja / Lectures:	angleški/english
	Vaje / Tutorial:	angleški/english

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: **Prerequisites:**

<ul style="list-style-type: none">• Vpis v doktorski študijski program.• Dodatnih pogojev ni.	<input type="text"/>
--	----------------------

Vsebina: **Content (Syllabus outline):**

This course addresses the use of multi-objective optimization methods in engineering design. After a general introduction to the multi-objective optimization principles, the students will be exposed to design of experiment techniques, state-of-the-art optimization algorithms, assessment methods and the use of meta-models for optimization. Advanced aspects like multi-criteria decision making and robustness will also be considered. The use of a state-of-the-art optimization software tool will provide students with concrete hands-on experience. The course will be complemented with successful examples of real industrial applications.

Topics covered will include:

- General introduction: multi-objective optimization problems, Pareto front
- Design of Experiments
- Algorithms for multi-objective optimization: genetic algorithms, simulated annealing
- Response Surface Models and its use for optimization
- Assessment methods
- Robustness
- Multi-criteria decision making
- Industrial applications, practical considerations, implications.

Temeljni literatura in viri / Readings:

1. Goldberg, D. E. *Genetic Algorithms in Search, Optimization, and Machine Learning*.
 2. Rao, S. S. (1996) *Engineering Optimization: Theory and Practice*, John Wiley & Sons.
 3. Cavazzuti, M. (2012) *Optimization Methods: From Theory to Design Scientific and Technological Aspects in Mechanics*, Springer Science & Business Media.
-

Cilji in kompetence:

Učna enota prispeva k razvoju naslednjih splošnih in specifičnih kompetenc:

- pridobitev temeljnega znanja o vodnih turbinah in centrifugalnih črpalkah, razumevanje pretvarjanja energije v teh strojih,
- sposobnost evidentiranja in razumevanja energetske, kavitacijske in dinamične zakonitosti,
- sposobnost uporabe pridobljenega teoretičnega znanja v praksi,
- sposobnost razumevanja in reševanja konkretnih tehnoloških problemov,
- sposobnost obvladovanja razvoja,
- suverenost in avtonomnost na področju strokovnega dela,
- sposobnost za svetovalno delo in sposobnost prenosa znanja drugim.

Objectives and competences:

This course will provide the students with the ability to apply multi-objective optimization techniques in engineering design problems. Upon completion of the course, the students will:

- [1] understand the principles of multi-objective optimization,
- [2] be able to select the most appropriate optimization method to apply depending on the problem,
- [3] get a good knowledge of current applications of optimization techniques in industry and
- [4] have a practical experience with a state-of-the-art software tool for multi-objective optimization.

Predvideni študijski rezultati:

Znanje in razumevanje:

Študent/študentka:

Intended learning outcomes:

Knowledge and understanding:

- understand the concepts, phenomena and processes,
- to find and use appropriate scientific literature,
- ability to apply theoretical knowledge in practice,
- to find the interconnection in simple and complex technological processes,
- be able critically evaluate the weak points in the process,
- to understand links to related learning courses.

Metode poučevanja in učenja:

- *predavanja,*
- *računske in laboratorijske vaje s praktičnimi primeri iz industrije.*

Learning and teaching methods:

- *lectures,*
- *computational and laboratory exercises with practical examples from the industry.*
